

EC GROW

Broadleaf Weed Control Plus

Award Turf Fertilizer Q3® Weed and Feed contains a combination of three proven weed control ingredients. This formula of 2,4-D, Dicamba and Quinclorac ensures control of the toughest weeds **including** already-germinated crabgrass. May be applied at all common application sites such as: residential turf, parks & athletic fields, golf course fairways & roughs, institutional sites and more.

Like conventional weed & feeds, this product needs to be absorbed by susceptible plants in order to be effective. For best results, delay mowing 2-3 days before application and apply when the grass is wet from dew or rain. However, with the active ingredient Quinclorac in our Q3® formula, your application site will stay clean of clover, dandelion and other tough weeds longer than those without.

Our Award Turf Fertilizer Q3® Weed & Feed products available:

15-0-4 25% PCSCU w/Q3

20-0-8 25% PCSCU w/Q3

Always refer to the actual product label for complete instructions and Directions of Use. Q3 is a registered trademark of PBI Gordon Corporation.

Key Benefits

- ***Broad Spectrum Weed Control***
- ***Kills Existing Crabgrass***
- ***Long lasting control****

*compared to products without Quinclorac
